

MOHAMMAD TAAHA ASHRAF

FULL-STACK DEVELOPER

New Delhi, India • +91 9582444921 • mtaahaashraf@gmail.com • [linkedin.com/in/mohammad-taaha-ashraf](https://www.linkedin.com/in/mohammad-taaha-ashraf) • github.com/m-taaha • [x.com/ mohammadtaaha](https://x.com/mohammadtaaha)

TECHNICAL SKILLS

Languages:TypeScript, JavaScript, C++, SQL, Python

Frontend:Next.js 15, React, Tailwind CSS, Base UI, HTML5, CSS3

Backend & Realtime:Node.js, Express, FastAPI, Socket.io, WebRTC, WebSockets

Databases & Caching:PostgreSQL, MongoDB, Redis, MySQL

Tools & DevOps:Turborepo, pnpm, Docker, Nginx, Git, GitHub, GitLab, Postman, Vercel, Render, Joi, Jest, Supertest

OPEN SOURCE CONTRIBUTIONS

Open Source Contributor | CropChain (Aperture 2.0) | [GitHub Repository](#)

Tech Stack: Node.js, Express, Joi, Jest, Supertest, JavaScript

- Transformed an unprotected backend route into a secure, production-ready API feature by architecting a three-layer validation and automated testing framework.
- Designed strict data validation schemas utilizing Joi to enforce structural integrity on client inputs, validating critical alphanumeric constraints and state-machine lifecycle stages before processing.
- Built and injected a centralized, decoupled validateRequest middleware into the Express routing pipeline to intercept invalid payloads and return a 400 Bad Request error.
- Engineered a robust automated integration test suite using Jest and Supertest to simulate live API endpoints and validate error-handling path coverage.
- Patched server lifecycle configurations with environmental conditional execution (process.env.NODE_ENV !== 'test') to prevent open handle leaks during test runs.

PROJECTS

Musafir Trips | Full-Stack Travel Agency Platform | [Live Demo](#) | [GitHub](#) | Tech Stack: Next.js, TypeScript, Prisma, PostgreSQL (Neon), Auth.js (v5), Tailwind CSS

- Built a full-stack CMS-driven travel platform with a secure admin dashboard covering tours, blogs, hero slides, enquiries, awards, and site-wide settings — deployed on Vercel.
- Implemented NextAuth v5 (JWT) with Google OAuth and credential-based login, protected by lightweight Edge middleware for route-level auth.
- Used Next.js Server Actions with Prisma 7 for all database mutations, with automatic ISR revalidation (revalidatePath) on every content change.
- Integrated Cloudinary for image uploads across all admin forms and a Tiptap rich-text editor for blog and content management.
- Added a floating WhatsApp contact bubble with dynamic number management and Sonner toast notifications for real-time admin feedback.

exac.draw | Collaborative Whiteboard | [Live Demo](#) | [GitHub](#) | Tech Stack: Next.js 15, Turborepo, WebSockets, PostgreSQL, Tailwind CSS, pnpm

- Architected a high-performance monorepo using Turborepo to manage shared packages between frontend and backend, reducing local build times and improving cross-environment code sharing.
- Engineered real-time canvas synchronization using WebSockets, enabling multi-user simultaneous collaboration with minimal latency.
- Implemented a custom canvas rendering engine to handle complex geometric shapes alongside persistent state architecture in PostgreSQL.

vidCall | Real-Time Video Conferencing | [Live Demo](#) | [GitHub](#) | Tech Stack: React, Socket.io, WebRTC, Node.js, Express

- Developed a high-performance video conferencing application utilizing WebRTC mesh network architecture and Socket.io for low-latency peer-to-peer audio/video communication.
- Engineered robust media stream handling logic to ensure stable connections during live camera, microphone toggling, and track renegotiation.
- Implemented fluid screen-sharing functionality by orchestrating media states and signaling events seamlessly within a React frontend.

kidsportal | Interactive Learning Platform | [GitLab Repository](#) | *Tech Stack: FastAPI, Python, React, InkJS, MySQL*

- Collaborated in a team of three to design and build a comprehensive administrative dashboard for managing educational content, structural analytics, and user progress.
- Developed a custom "Stitcher" logic compiler to process database-stored story fragments into InkJS-compatible bytecode for dynamic, branching narratives.
- Architected a scalable backend using FastAPI to manage real-time interactive story states and concurrent student user data efficiently.

EDUCATION

Jamia Hamdard University *New Delhi, India*

Bachelor of Technology in Computer Science and Engineering • Expected Graduation: 2027

Core Coursework: Data Structures and Algorithms (DSA) in C++, Object-Oriented Programming (OOP), Database Management Systems (DBMS), System Design basics.
